### Online Tips

#### How to keep your car looking brand new...

##### Car Care:

**1. Towels.** Only use microfibers on paint and interior PERIOD. It's a good towel to have in glove box or in trunk for a quick interior detail or to clean contaminants off of paint. Best place to buy: Sams Club - 20 microfibers for \$10  
<http://texasmicrofibers.com/101.html> (INFO ABOUT MICROFIBERS)

**2. Best wax.** Turtle Wax Ice. No white residue left on car. Very easy to apply and can be applied to rubber moldings and roof racks. Perfect for a quick shine that lasts for months. Cost around \$15 a bottle. Cleaning time around 20 min. or less. Option 2: QUICK DEATILER spray available at any auto part store .

**3. Touch ups.** Touch-ups only work for Certain colors and certain areas of the car. Generally speaking darker colors tend to have the best results. Silver or any medium colors, tan or teal have the least results. Touch-ups work best for bumpers, door edges, or any area that is considered not in the line of sight. Simple touchup can hide damages that could cost thousands in repairs. Any questions contact us directly 414.305.5005.

**How to do it.** Acci-dent has the same paint system that all of the top-bodyshops uses. Simply ask for touch-up and we will make some specifically for your car.

##### 4 steps for touchup:

1. Rubbing alcohol 91% from Walgreens to prep and remove old repairs that were done incorrectly
2. Any disposable rag or paper towel
3. Paint brush (Michaels arts and craft store) under \$5 will work.
4. Paint thinner to clean brush after using.

First clean area with paper towel and rubbing alcohol. (*removes wax and dirt from crevices.*) Use brush to apply onto chip or scratch. (*Practicing on piece of paper before you do this is always a good idea.*) We've all seen people try this and "mop it on" making the repair look more obvious. This is why you need the rag and alcohol to remove the excess and start over. If you apply too much or go too far outside of the chip, simply remove the excess and try again. Repair time as little as 30 secs. Stand back from repair 5 - 10 feet to check quality of repair. If not satisfied, remove paint with alcohol and try again. NOTE: Alcohol will take off wax or may make area dull. Touchup will dry in about 5-10 mins. Wax area to replenish the shine. Afraid to try it? Call or stop in. We'll show you how it's done!!

**4. Contaminants on paint.** (*bird dropping, sap, and tar are corrosive to the paint on contact.*) Wax is general purpose cleaner for wax!!

##### 5. How NOT to get a ding.

**Rule #1** Never park next to car with a baby seat in it.

**Rule #2** Park exactly in middle of lane... one centimeter off could mean the difference between getting hit.

**Rule #3** Try and park next to another nice car.
